Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP). This://www.edgp.ebi.ac.uk. This Drosophila melanogaster BAC http://www.edgp.ebi.ac.uk. Billaud at CEPH (Centre Ilbrary (Dros BAC) was made by Alain Billaud at CEPH (Centre G'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SCYMCYGSARAGGGGGSCVCCMAMGCMWGGGCRGTGSTAAAVAAAAAAACARTCMYTTTTT

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information melanogaster genome using these BACs. For further information melanogaster BAC library was prepared by Kazutoyo Oscoegawa and melanogaster BAC library was prepared by Kazutoyo Oscoegawa and melanogaster BAC library was prepared by Kazutoyo Hoscoegawa and Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Cancer Genetics at the Roswell Park Cancer Institute by Buffalo, Cancer Genetics at the Roswell Park Cancer Institute by Dartial NY. The library is named RPCI-98 and was constructed by partial constitution of Drosophila DAN provided by the BDGP from the ECORI digestion of Drosophila DAN provided by the BDGP's isogenic Strain y2; cn bw sp, the same strain used for the BDGP's isogenic Strain y2; cn bw sp, the same strain used for the BDGP's individual BAC clones, the entire library and how to order individual BAC clones, the entire library, or and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be filtered for the BACPAC Resource Center can be filtered for the BACPAC Resource Center can be filtered for hybridization from the BACPAC Resource Center can be filtered for hybridization from the BACPAC Resource Center can be filtered for hybridization from the BACPAC Resourc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         654 KCSCCCGYCKTGTCGCGTTYKCGCGTGSBGYYGSTSSKCGTKTYTYTYKBTYKTTTTTC 713

                                                     AL Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila aron melanogaster BAC library was prepared by Kazutoyo Osoegawa and Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, EcoRI digestion of Drosophila DNY. The library is named RPCI-98 and was constructed by partial isogenic strain y2; cn bw sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be constructed by partial places. The providual back of the BDGP from the pland EST libraries. A more detailed description of the library filters for hybridization from the BACPAC Resource Center can be constructed by partial and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be constructed by the BDGP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                173 uguuuguu 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEBH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 gagagucuuuugccuccagugucuuccguuuguacucguccuccucucccucucccggccg 120
* NOTE: This is a 'unfinished' sequence. It currently * consists of 25 conflys. The true order of the pieces is * not known and their order in this sequence record is * arbitrary. Where the conflys adjacent to the vector can * be identified, they are labelled with 'clone_end' in the * feature table. Some order and orientation information * can tentatively be deduced from paired sequencing reads * which have been identified to span the gap between two * conflys. These are labelled as part of the same * 'fragment_chain', and the order and relative orientation * of the pieces within a fragment_chain is reflected in * this file. Gaps between the conflys are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as * soon as it is available and the accession number will be * preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ggauggg 127

COMMENT

Submitted (11-MAR-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 ISA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
IMPORTANT: This sequence is unfinished and does not necessarily progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Contig_ID: 00010 Length: 5345bp

NOTE: This is a 'working draft' sequence. It currently
consists of 19 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

     V63778 standard: DNA: 940 BP. V63778; 17-MAR-1999 (first entry) Sequence derived from the 5' end Reticuloendotheliosis virus type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expression vectors containing IRES and/or encapsidation enhancer derived from type C retrovirus other than FMLV and MOMLV

Claim 6; Page 32; 43pp; French.

The present sequence is derived from the 5' end of the genomic RNA of RetLouLoendotheliosis virus type A (REV-A). The specification also of the genomic RNA of a type C retrovirus other than Friend murine leukaemia virus (FMLV) and Moloney murine leukaemia virus (HOMLV). The in a vector for permitting or enhancing the encapsidation of a retroviral vector. The vectors can be used for gene therapy, production of recombinant polypeptides or production of transgenic animals.

         claim 18; Fig 6; 127pp; English.

Claim 18; Fig 6; 127pp; English.

The invention relates to a recombinant fowlpox virus (FPV) whose nucleic many invention relates to a recombinant fowlpox virus (REV), and acid does not encode an active reticuloendotheliosis virus (REV), and acid does not encode against fowlpox virus. The recombinant FPV is whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be prevent than 1 day of age. Alternatively, chickens older than naccinated at older than 1 day of age. Prior vaccine and field strains fev M (FPV mild strain) at 1 day of age. Prior vaccine and field strains of FPV carry integrated REV sequences. Some of the FPV strains carry a near full length provirus of REV, and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Powlpox virus (FPV S) 5' ITR sequence.

bast cell and form provirus

Example; Page 17; 28pp; English.

The universal retroviral vector pp0115-R1 (given in 076041) was obtained by replacing the SV40 promoter and hpt gene of pp0111-R1 (276038) with the multiple cloning site of pBluescript II KS. The of downstream activation of cellular proto-oncogenes.

The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes. Sequence 5528 Bp; 1265 A; 1423 C; 1457 G; 1383 T

Disclosure; Page 46-49; 67pp; English. DNA encoding new myeloid cell leukemia associated gene mcl-1 was 100 and 100 arms prepd. from ML-1 human myeloblastic isolated from a CDNA library prepd. from ML-1 human myeloblastic leukemia cells induced with TPA. The predicted gene product (given in R68814) contained 350 amino acids and had a mol.wt. of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               misc_difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              therapeutic;

Alternaria alternata.
                                                                                                                      r-rsus; Roouya.

Recombinant DNA encoding allergens of Alternaria alternata - useful Recombinant DNA encoding allergens of Alternaria alternata alternata in diagnosis and treatment of A. alternaria alternaria sequence encodes an Alt a 12 allergen protein isolated from The present sequence encodes an Alt a 12 allergen protein isolated from Alternaria alternata. Peptide epitopes from Alt a 12 and Alt a 45 Alternaria alternata. Peptide epitopes from Alt a 12 and For in vitro detection (R88672) are useful as diagnostic reagents, e.g. for in vitro detection (R88672) are useful as diagnostic reagents, e.g. for in vitro detection for allergy caused by Alt a 45 and 12 (by reaction with IgE in serum). The peptides of allergy can also detect cellular reaction to the specified allergens (from They can also detect cellular reaction to the specified allergens (their stimulatory or inhibitory effect on this reaction). The peptides can also be used therapeutically to induce immunotolerance or anergy of

Pr Nucleic acid encoding human aminopeptidase p
Claim 13; Page 109-139; 201pp; English.

CC This invention describes the isolation of a novel human aminopeptidase p
CC (Amp). This protein is used to produce recombinant Amp and can be used
CC for gene therapy for treating Amp-deficiency conditions, Its fragments
CC are used as primers and probes to identify patients with homozygous and
CC defective in Amp are at risk of developing angioedema if treated with
CC in cases of excessive Amp expression. The product of the invention is
CC generate transgenic animals, and comparisons of genomic sequences are
CC used to detect mutations. Amp inhibitors are potentially useful as
CC or atheroscierosis. The structure of Amp is used to design synthetic
CC inido bonds, can be used to degrade industrial protein feeds to free
CC amino acids, to degrade proteinaceous wastes, as additives in enzyme
CC methods to study Amp distribution.

Processing the solution of liver activin - provided including sub-units of liver activin - provided including growth and differentiation of cells, e.g. for useful for regulating growth and differentiation of cells, e.g. for provides marine liver activin beta e polypeptide. The invention CC provides marine liver activin beta c and beta e genes. Disorders of cell crowth or differentiation (or susceptibility to them) are diagnosed by activin gene. Disorders of haematopolesis, erythroid differentiation, compound secretion or cardiac covarian follicular maturation, hormone secretion or cardiac covariant follicular maturation, hormone secretion or cardiac covariant follicular maturation that can be diagnosed using the liver covariant follicular activin compound or agent that upregulates the compound's caponists can be used to increase growth and regeneration of liver tissue. Cc agonists can be used to increase growth and regeneration of liver tissue. Cc astroporosis or osteomalacia) or haematopolesis, particularly cultivincorders. Antibodies (which bind to liver activin receptors) and to consist the produce the liver activin correctly processed and cc screening for liver activin modulators.
